THE ALASKA FARMHOUSE

Located on 4-1/2 acres of exclusive property high above the city of Anchorage, this house was conceived as a farmhouse for clients originally from the Midwest. Situated on a rugged ocean-facing lot, the initial concept focused on maximizing privacy and views in the context of a traditional home appropriate to Alaska. Situated in a meadow below the upper treeline, the driveway winds through over 600 feet over mature spruce before the house becomes visible.

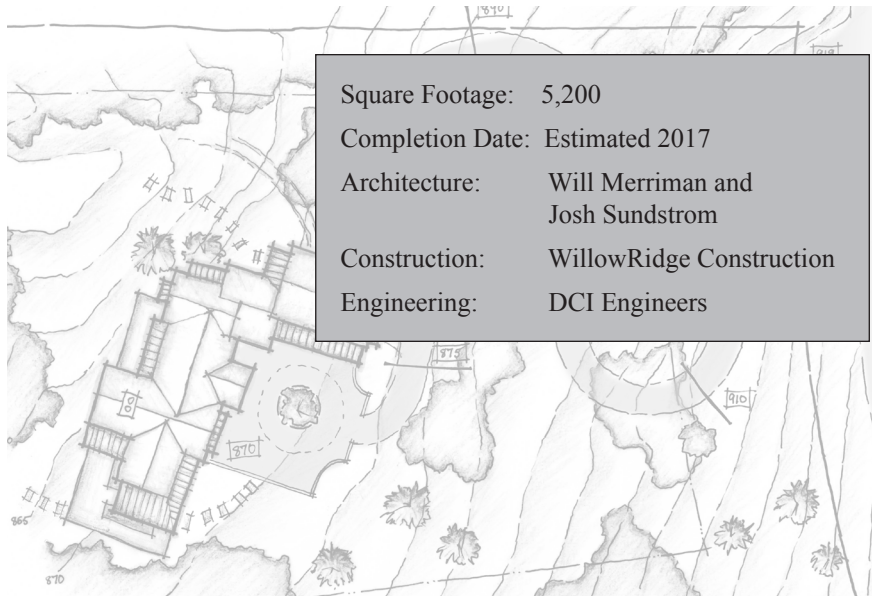

The home is designed around a main first level that stretches across the width of the site facing with full views of sunsets over the water. A narrow footprint brings light deep into the structure during the long winter days. Sun porches, reading nooks and a full library lend timelessness to more modern appointments.

A well-appointed kitchen pairs with a traditional butler's pantry and walk-in larder providing generous cooking and entertaining space for a large family.

Materials include timber framed entry and awning, cedar shake and painted clapboard siding, stone and salvaged brick chimneys, and standing seam roofing.

COURTYARD AND ENTRY

Square Footage:	5,200
Completion Date:	Estimated 2017
Architecture:	Will Merriman and Josh Sundstrom
Construction:	WillowRidge Construction
Engineering:	DCI Engineers
